5 Significant Accounting Policies

The principal accounting policies applied by the Bank in the preparation of these financial statements are presented below. These policies have been consistently applied to all the years presented unless stated otherwise.

5.1 Basis of Measurement

The Financial Statements of Entity have been prepared on the historical cost basis, except for the following material items in the Statement of Financial Position:

- Financial assets, held for trading are recorded in the statement of financial position at fair value and the changes in the value have been routed through profit or loss statement,
- Available for sale investments (quoted) are measured at fair value,
- Liabilities for defined benefit obligations and staff loans provided at subsidized interest rates as per Employee Bylaws of the Bank are recognized at the present value of the defined benefit obligation less the fair value of the plan assets.

5.2 Cash and Cash Equivalents

The cash and cash equivalents include cash in hand, balances with banks and financial institutions, money at call and short notice and highly liquid financial assets with original maturity of three months or less from the acquisition date that are subject to and insignificant risk of changes in their fair values and are used by the microfinance in the management of its short-term commitments.

Cash and Cash equivalents includes cash in hands, deposits with BFLs and other short-term investments with original maturities of three months or less.

5.3 Financial Assets and Financial Liabilities

Recognition

The Microfinance recognizes financial assets and financial liabilities on the date it becomes party to the contractual agreement (trade date) and recognizes changes in fair value of the financial assets or financial liabilities from that date.

Classification and Measurement

5.3.1 Financial Assets

Financial Assets are classified mainly under amortized cost, fair value through profit or loss and fair value through OCI. Financial Liabilities are classified at amortized cost or fair value through profit or loss.

a. Measured at Amortized Cost

Financial assets that are held within a business model whose objective is to hold financial assets in order to collect contractual cash flows that are solely payments of principal and interest, are subsequently measured at amortized cost using the effective interest rate ('EIR') method less impairment subject to Carveout issued by ICAN, if any. The amortization of EIR and loss arising from impairment, if any is recognized in the Statement of Profit and Loss.

b. Measured at Fair Value through OCI

Assets are categorized under this category if the business model is to obtain the contractual cash flow from the assets but the contractual cash flow isn't solely repayment of principal and interest.

Equity Instrument which are not held for trading and initially recognized as held for trading for which the Microfinance makes an irrevocable election to carry the changes in fair value of the instrument through OCI are measured at Fair Value through other Comprehensive Income.

c. Measured at Fair Value through Profit & Loss

The Microfinance classifies the financial assets as fair value through profit or loss if they are held for trading or designated at fair value through profit or loss.

Any other financial asset not classified as either amortized cost or FVOCI, is classified as FVTPL.

5.3.2 Financial Liabilities

a. Measured at Fair Value through Profit & Loss

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss. Upon initial recognition, transaction cost i.e. directly attributable to the acquisition are recognized in Statement of Profit or Loss as incurred. Subsequent changes in fair value are recognized at profit or loss.

b. Measured at Amortized Cost

All financial liabilities other than measured at fair value through profit or loss are classified as subsequently measured at amortized cost using effective interest method.

Derecognition

The Microfinance derecognizes a financial asset when the contractual rights to the cash flows from the financial asset expire or it transfers the contractual rights to receive the cash flows from the asset.

A financial liability is derecognized when the obligation specified in the contract is discharged, cancelled or expires.

Determination of Fair Value

The fair value of a financial instrument is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The Microfinance follows three levels of the fair-value-hierarchy as described below:

Level 1: Quoted (unadjusted) prices for identical assets or liabilities in active markets;

Level 2: Significant inputs to the fair value measurement are directly or indirectly observable or valuations of quoted for similar instrument in active markets or quoted prices for identical or similar instrument in inactive markets; and

Level 3: Significant inputs to the fair value measurement are unobservable.

Investment in Unquoted Equity Instrument are carried at cost as the market price of such shares could not be ascertained with certainty at the reporting date.

5.4 Impairment

The Microfinance reviews its individually significant loans and advances at each reporting date to assess whether an impairment loss should be provided in the Statement of Profit or Loss. The Management's judgement is extensively used in the estimation of the amount and timing of future cash flows when determining the impairment loss. These estimates are based on assumptions about a number of factors and hence actual results may differ, resulting in future changes to the provisions made.

The individual impairment provision applies to financial assets evaluated individually for impairment and is based on Management's best estimate of the present value of the future cash flows that are expected to be received. In estimating these cash flows, Management makes judgements about the number of factors including a borrower's financial situation and the net realizable value of any underlying collateral. Each impaired asset is assessed on its merits to estimate the recoverable amount of cash flows. A collective impairment provision is established for:

- groups of homogeneous loans and advances and investment securities which are held-to-maturity, that are not considered individually significant; and
- groups of assets that are individually significant but that were not found to be individually impaired.

The collective impairment is carried using the statistical modelling such as historical trends of probability of defaults, timings of recoveries, and current economic and market conditions which may warrant for the loss being greater than the suggested by the historical trends.

For the purpose of collective assessment of impairment, Microfinance has categorized assets into following broad products as follows:

- Micro Loan
- Seasonal Loan
- Emergency Loan
- Disaster Loan
- Micro Enterprise Loan (Collateral Loan)
- Low Cost Housing Loan

Applicability of Expected Credit Loss Model (ECL) as per NFRS 9.

The Applicability of NFRS 9 Expected Credit Loss Model has been made mandatory by Nepal Rastra Bank vide circular dated 2081.06.06 from Q1 of FY 2081-82. The Microfinance has Complied with the requirements to implement NFRS for calculation of impairment of loans and receivables. Accordingly, individual and collective impairment loss amount calculated as per NFRS is compared with the impairment provision required under NRB directive no. 2, higher of the amount derived from these measures is taken as impairment loss for loans and receivables.

5.5 Property, Plant & Equipment

Recognition and measurement: Property, plant and equipment are measured at cost less accumulated depreciation and impairment losses, if any. Cost includes expenditures directly attributable to the acquisition of the asset.

Depreciation & Amortization: The Microfinance depreciates property, plant and equipment following Written Down Value method applying the Depreciation rates prescribed by Income Tax Act, 2058. The rates used for depreciation of assets for the current and comparative period of significant items of property, plant and equipment are as follows:

Type of Asset	Depreciation Rate
Buildings	5%
Computer & Accessories	25%
Vehicles - Two-wheeler	20%
- Four-wheeler	20%
Furniture & Fixtures	25%
Equipment & Others - Equipment	25%
Other Assets	15%
Intangible Assets	Rate set, dividing the cost of the property by adjusting in the nearest half year of the fiscal year

The Microfinance adopts cost model for entire class of Property, Plant and Equipment. It has not measured any Property Plant and Equipment at revaluation model and at fair value. The items of Property, Plant and Equipment are measured at cost less accumulated depreciation and any accumulated impairment losses.

Depreciation of newly acquired assets is charged based upon the date of invoice and assets having acquisition cost less than NPR. 1,000 have been written down as an expense for the period in the Statement of Profit and Loss.

5.6 Goodwill and Intangible Assets

Any excess of the cost of acquisition over the fair values of the identifiable net assets acquired in Business Combination is recognized as goodwill. Goodwill is measured at cost less any accumulated impairment losses/accumulated amortization. Goodwill is reviewed for impairment annually, or more frequently, if events or changes in circumstances indicate that the carrying value may be impaired.

Intangible assets are recognized separately from goodwill when they are separable or arise from contractual or other legal rights, and their fair value can be measured reliably. These intangible assets are recognized at historical cost less impairment /amortization over their estimated useful life.

5.7 Tax Expenses

Tax expenses comprises of current tax and deferred tax.

5.7.1 Current Tax

Current tax is the income tax expense recognized in the statement of Profit or Loss, except to the extent it relates to items recognized directly in equity or OCI in which case it is recognized in equity or in other comprehensive income. Current tax is the amounts expected or paid to Inland Revenue Department in respect of the current year, using the tax rates and tax laws enacted or substantively enacted on the reporting date and any adjustment to tax payable in respect of prior years.

5.7.2 Deferred Tax

Deferred tax is recognized on temporary differences between the carrying amounts of assets and liabilities in the balance sheet and the amounts attributed to such assets and liabilities for tax purposes. Deferred tax liabilities are generally recognized for all taxable temporary differences and deferred tax assets are recognized to the extent that it is probable that future taxable profits will be available against which deductible temporary differences can be utilized.

Deferred tax is calculated using the tax rates expected to apply in the periods in which the assets will be realized or the liabilities settled, based on tax rates and laws enacted, or substantively enacted, by the balance sheet date. Deferred tax assets and liabilities are offset when they arise in the same tax reporting group and relate to income taxes levied by the same taxation authority, and when the group has a legal right to offset.
